

TrellTent® Espace

TrellTent® is a versatile rapid deployable inflatable tent and shelter system, which is used in military as well as civil applications all over the world. TrellTent® Espace is a further development of the TrellTent®.

- New design with the air beams on the outside, giving several advantages: A lot of extra space inside the tent; easy positioning of beds and other equipment; improved function of heat, cold or NBC protection; simplified handling of the extra protection.
- Extended width, adapted to longer beds.
- The system of coupling the tents together is totally new, giving an air and watertight connection.
- Improved general construction, which makes it practically impossible for water to get into the tent.

The well-known advantages of the old TrellTent® system are maintained:

- The half-cylindrical shape for rigidity and stability.
- The air beams with separate inner tubes and spacing collars of aluminium, giving an extremely airtight construction, which is easy to maintain.
- The high quality craftsmanship and materials, giving an excellent resistance against wear and tear.
- The easy handling and fast erection.

Length, incl. beams:	7300 mm
Length, excl. beams:	7200 mm
Width, incl. beams:	6200 mm
Width, excl. beams:	5600 mm
Height, excl. beams:	2700 mm
Weight, incl. spacing collars:	180 kg

Patent and Protection of designs pending.
