TRELLEBORG LAUNCHES BAYONET GLOVE RING SYSTEM

The world leading manufacturer of chemical protective suits, Trelleborg Protective Products AB, has launched the Trelchem® Bayonet glove ring system. This innovative system provides a longed-for improvement of chemical protective suits and makes life easier for emergency teams/hazmat teams and others dealing with chemicals and chemical accidents.

The Trelchem® Bayonet glove ring system provides a fast, easy and secure way of exchanging gloves on chemical protective suits. The system makes it quick and easy to attach a variety of glove combinations. "Up until now there has not been a glove attachment system on the market that provides a secure attachment for gastight (type 1) suits, where the gloves are quick and easy to change so that they can be replaced even during field conditions. This is now possible and a lot of users have been asking for it", says Ulf Nyström, Product Manager PPE.

The system is available in Europe as from now. An American NFPA 1991 certification is pending.

The Trelchem® Bayonet glove ring system was introduced at the INTERSCHUTZ exhibition, the world's leading flagship trade fair for the fire & rescue services, which this year took place in conjunction with INTERPOLICE.

About Trelleborg Protective Products AB
