## **NEW RECOIL LED Technology**

Peli Products is proud to announce the launch of not only a new line of professional lights, but a whole new technological innovation: the RECOIL LED Technology.

What sets the Recoil technology apart from other lights is the ability to create a truly focused beam of light, previously unobtainable from LED lights. The key to this outstanding development is a design that directs all of the 1W Luxeon LED light back into the reflector to focus the light into a truly impressive beam of pure white light. When compared to existing multi-LED lights, the Recoil technology generates a beam 33 times brighter.

**RECOIL technology produces a 33-times brighter beam of light than existing multi-LEDs on the market**

The patent pending technology has been applied to the classic Peli Super SabreLite™ and the M8. The Sabrelite™ is famous for its chemically resistant Xenoy polymer body and rugged submersible construction (150 m). The M8 is known by a sure-grip vinyl sheath and Xenoy body which resists chemicals and extreme temperatures. Now these two lights have added the benefits of a greater battery life (6 hours) and the confidence of knowing that the RECOIL LED technology has an extraordinary 10,000 hour lamp life. It will never let you down even in the most dangerous of situations. CE ATEX approved for hazardous location use proves the point.

Sumarizing, you get an incredibly powerful light, with a longer lamp life and an extraordinary burn time that surpasses all others in the market. So the combination of all these facts save costs in replacement of batteries for the user and also is positive for the environment while offering the latest in LED technology. The 21st century will bring us many new technological discoveries, and without a doubt, the new Recoil Technology for Peli™ will be one of them.

As for all products from Peli™ this new torch is covered under the Unconditional Guarantee.

'You break it, we replace it ... forever'
