

**TRELLCHEM**®

# SAFETY AND QUALITY STANDARDS

## TRELLCHEM VENTILATION SYSTEM

- Increases the safety by keeping a controlled overpressure of approximately 80 MPa, which minimizes risk of penetration of hazardous gases into the suit in case of puncture
- Flow rate can be adjusted on the outside regulating valve, giving 0, 2, 30 or 100 l/min.
- An airstream is spread over the visor to minimise the risk of fogging.
