PRESS RELEASE – NEW PRODUCTS – TRELLECHEM® AV-VALVE MARK II

Headline:

TRELLEBORG HAS LAUNCHED A NEW UNIQUE COMBINED VENTILATION & AIRLINE PASS-THROUGH VALVE WITH TWO-HAND SAFETY GRIP

Text:

The TRELLECHEM® chemical protective suits by Trelleborg have proven themselves in day-to-day use by leading fire and rescue services, law enforcements, anti terror teams, civil defence authorities and by the chemical industry world-wide.

Trelleborg has launched its new unique and exclusive **TRELLECHEM® AV-VALVE MARK II**. The new valve allows the responders to regulate the ventilation of the Trellechem suits by 3 ventilation rates (2, 30, 100 l/min) plus an off position. The off and 100 l/min positions require two-hand grip to prevent accidental loss of ventilation or excessive air consumption. The airline pass-through version comes with a waist belt to relieve the pulling force from the external air supply hose. The Mark II valve has a low and flat profile to safeguard that it does not prevent movement during confined space entries.
